

# Cyber Security and Risk GAP Analysis

Identify your greatest cyber security risks. Prioritise your remedial actions.

## Do you need to:

- Identify the organisation's cyber security risks?
- Improve cyber security maturity?
- Achieve GDPR Compliance?
- Utilise established frameworks to focus your attention and budget?

# Why the GAP Analysis is so important?

A cyber security gap analysis determines the differences between the **current** and **ideal** state of information security within your organisation. It utilises existing frameworks and controls to provide a clear path to meeting cyber security best practice in the most efficient way possible.

# How does it work?

Spector conducts a workshop with the relevant employees in the organisation and covers a wide variety of cyber security-related components, controls and procedures. We also touch upon the organisation's business imperatives, as well as the security challenges employees themselves feel that they have at work. We then identify the framework and controls required to develop your Cyber Risk analysis.

## Process

## Schedule and Duration

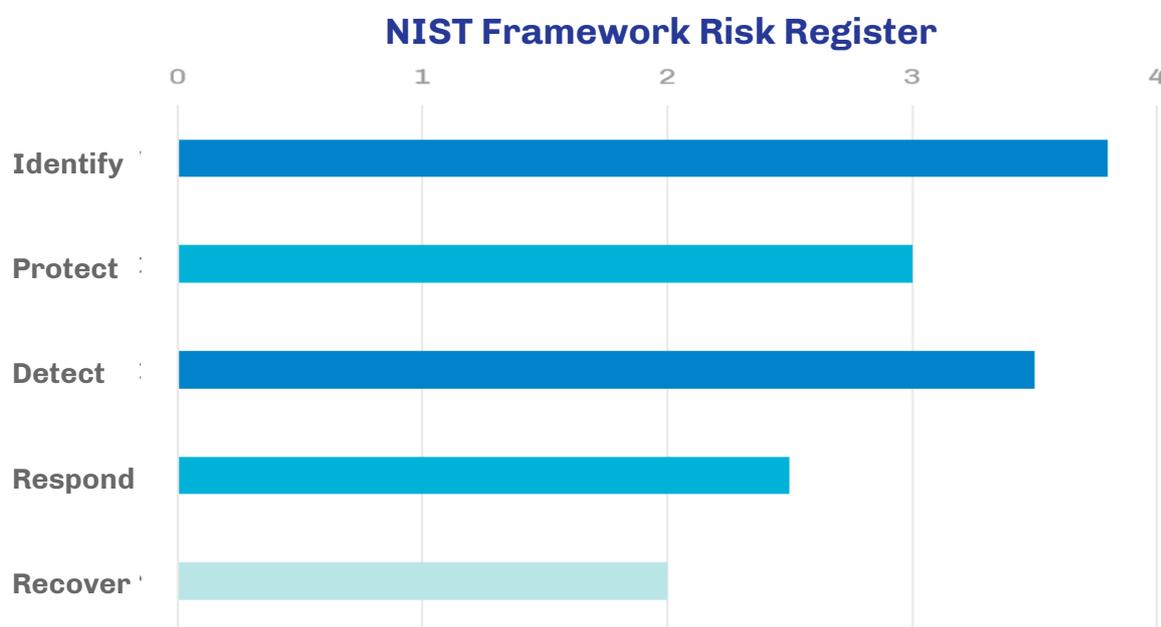

The duration of a standard gap analysis varies, depending on the nature of your business and IT setup. But typically, it takes **2-5** days to complete, including two workshop sessions, plus processing of responses and report.

# What it delivers:

- GAP Analysis report with overall results
- Prioritised risk assessment with recommendations based on the NIST Security Framework and **20 key control areas**.
- Remediation project outline with core recommendations and timelines.
- Suggestions for ongoing cyber risk and compliance management.

## Report Dashboard

### Risk Levels:

#### Critical

- Document a complete Asset Register
- Documented the Companies Business Continuity Plan

#### High

- Provide Cyber Security Training for all employees and contractors where applicable
- Enable encryption to data where applicable
- Enable Multi Factor Authentication (MFA) and Single Sign On (SSO) where possible

#### (+) Medium and Low Risks
